

Host Facility Information

Texas Tech University Health Sciences Center of El Paso:

TTUHSC El Paso is the only health sciences center along the U.S.-Mexico border that provides the opportunities and environment for direct intellectual and interpersonal exchanges among nursing, medical, and graduate research students on one campus.

It is the fourth university in the Texas Tech University System and is comprised of three schools: the Paul L. Foster School of Medicine, Gayle Greve Hunt School of Nursing and the Graduate School of Biomedical Science.

Our physicians, clinics, and partnering hospitals provide over \$33 million in free health care services to the El Paso community every year.

[The Paul L. School of Medicine](#) is the only medical school on the U.S.-Mexico border and the only medical school in the nation that requires its students to learn Spanish. Unlike a traditional medical school, which requires students to wait until their third year of studies before they are introduced to the clinical sciences, students at the PLFSOM are immersed into the basic and clinical sciences in their first year.

William Beaumont Army Medical Center Orthopaedic Surgery Residency Program:

The William Beaumont Army Medical Center Orthopedic Surgery Residency Program integrates the unique aspects of military orthopedic surgery with the academic requirements of the Residency Review Committee of the Accrediting Council of Graduate Medical Education (ACGME). The training program provides a well-rounded experience in the many specialties within the realm of Orthopedic Surgery.

The Orthopedic Surgery Residency at WBAMC is unique in that it is the only true military-civilian combined program. Being combined with Texas Tech University, residents are afforded the opportunity to train at a busy, Level I, metropolitan trauma center. This training in trauma, along with the broad orthopedic training at WBAMC produces orthopedic surgeons capable of providing excellent patient care, whether in a large, modern Army Medical Center or in the austere conditions of a small, mobile Forward Surgical Team.
